Systems Quick Guide

Beeline and BambooHR for hiring managers: what lives where, raising requests, approving timesheets and invoices.

Systems Quick Guide

Revised March 2026

Audience

Hiring managers, HR and Finance

Classification

Internal use only

Which System Does What

Two systems, and the split is clean.

	Beeline	BambooHR
What it is	Our vendor management system	Our HR system
Who is in it	External workers only	Everyone — employees and external workers
What you do there	Raise requests and SOWs, review candidates, approve timesheets and invoices, extend and close assignments, run spend reports	Look up who someone is, who they report to, when their assignment ends
Who uses it	Hiring managers, HR, Finance, agencies and contractors	Everyone

The rule of thumb: if it is a transaction, it is in Beeline. If it is a record of a person, it is in BambooHR.

How they connect. When an assignment or SOW is confirmed in Beeline, HR creates the person's record in BambooHR. That record is what IT works from to create accounts and issue equipment, and what it works from to close them at the end. The chain only holds if Beeline is kept current — an assignment closed in Beeline drives the BambooHR end date, which drives the IT offboarding.

Everything else goes by email. We deliberately do not have a separate ticketing system for this:

- **hr@helvia.ai** — process, classification, agencies, rates, anything unusual
- **it@helvia.ai** — accounts, access, equipment
- **finance@helvia.ai** — budget, invoices, payment timing

Agencies and contractors get their own Beeline logins. They submit candidates, timesheets and invoices there. They have no access to BambooHR and cannot see anything beyond their own workers.

What is deliberately not here. No requisition templates, no multi-level approval chains, no separate procurement portal. At our size those cost more in administration than they return. If you find yourself wanting one, tell HR — it may mean we have outgrown something.

Beeline — Getting Access and Signing In

Getting access. Every people manager gets Beeline access automatically. If you do not have it and need to raise a request, email hr@helvia.ai and it is set up the same day.

Signing in. Beeline uses single sign-on with your Helvia account — the same credentials as everything else, no separate password. Go to beeline.helvia.ai and it should pass you straight through.

Roles

Role	Who gets it	Can do
Manager	People managers and anyone who owns an assignment	Raise requests and SOWs, approve timesheets and invoices for their own workers, run reports on their own team
Approver	Department heads, Finance	Everything a manager can do, plus approve above the threshold
Admin	HR	Everything, across all workers
Supplier	Agencies and contractors	Submit candidates, timesheets and invoices for their own workers only

First time in. Check your profile — Settings → Profile — and confirm your email is right, since that is where approval notifications go. Set a delegate at the same time rather than waiting until you are about to go on holiday.

Finding your way around

- **Home** — anything waiting on you
- **Requests** — worker requests and SOWs you have raised, with status
- **Approvals** — timesheets, invoices and requests needing your decision
- **Workers** — the people currently assigned to you
- **Reports** — spend and assignment reports

If something is not there. External workers are only in Beeline once HR has confirmed the assignment, so a gap usually means the agency has not accepted it yet rather than a system problem. Check the request status before emailing.

Problems signing in go to it@helvia.ai. Problems with what you can see or do once you are in go to hr@helvia.ai — that is a permissions question, not an IT one.

Beeline — Raising a Request

Both tracks start in the same place: **Requests** → **New**. Beeline then asks which kind, and the two paths diverge.

Worker Request — Track 1, an agency temp. See Raising a Request in the Contingent Worker Process Guide for what to put in each field.

Statement of Work — Track 2, a contractor. See Contract and Statement of Work in the Contractor Process Guide.

If you are not sure which, stop and read Choosing the Right Track in the handbook, or email hr@helvia.ai. Raising the wrong type is not a disaster — HR will convert it — but it costs a few days.

Saving as you go. Both forms save as a draft, so you do not have to finish in one sitting. Drafts sit under Requests until you submit them, and Beeline will not chase you about one.

Submitting. Beeline validates required fields and shows you the approval route before you commit, so you can see who it is going to. After submission you will see one of:

Status	Meaning
Draft	Not submitted yet
Pending approval	With your approver
Pending HR review	Approved internally; HR is checking classification and rate
Open to agencies	Sent out; candidates expected in 3–5 working days
Candidates ready	Waiting on you to review
Active	The assignment or engagement is running
Closed	Finished
Rejected	Turned down, with a reason

Chasing. Everything waiting on someone else shows who, under Requests. If an approval has sat for more than two working days, a nudge is reasonable. HR sees anything stuck for more than three.

Copying a previous request. You can duplicate one — open it and choose Copy. Useful for a genuinely repeating need, but read every field before submitting. A copied description that no longer matches the work is the single most common cause of a bad shortlist.

Beeline — Approving Timesheets

Timesheets sit under **Approvals → Timesheets**, and Beeline emails you when one is waiting.

The deadline is 5 p.m. Monday for the week that ended the previous Sunday. Approving releases payment to the agency.

Two ways to approve

From the email. The notification carries Approve and Reject links. Clicking one opens a reply — send it as is, or add a comment first. Fine for a straightforward week.

In Beeline. Go to Approvals → Timesheets. You will see each worker, their total hours and any overtime. Click through for the day-by-day breakdown. Tick several and approve them together where they are routine.

Check before you approve: total hours look right for the week, any overtime was agreed with you in advance, and the days match what actually happened. This is the only point at which anyone looks, and it is your budget.

Rejecting. Choose a reason — hours incorrect, overtime not approved, wrong cost centre, or other with a note. The worker corrects and resubmits, usually within a day. Talk to them as well as rejecting in the system;

a rejection with no conversation reads worse than it is.

Overtime. Beeline flags anything over 40 hours in a week. In California and Colorado it also flags daily overtime, because those states count overtime by the day. If you see overtime you did not agree to, reject it and talk to the worker and the agency.

Delegates. Set one under Settings → Delegates before you are away — you can set a date range in advance. Your delegate sees and approves your timesheets. Approvals do not reassign themselves if you simply stop responding.

Late approvals delay the agency invoice and often the worker's pay. HR chases anything outstanding on Tuesday morning. If you are going to be genuinely unavailable, set a delegate rather than relying on catching up.

Expenses work the same way, under Approvals → Expenses, on the same weekly cycle, with a receipt required on every line.

Beeline — Approving Invoices and Milestones

This applies to **contractors only**. Agency invoices on Track 1 are generated from approved timesheets and need no separate approval — see Agency Invoices in the Contingent Worker Process Guide.

Where to find them: Approvals → Invoices. Beeline emails you when one arrives.

The deadline is close of business Monday, so Finance can pay on schedule.

How it works. The contractor marks a milestone complete against the SOW and submits an invoice for it. You confirm the milestone really is complete, then approve. Approval releases the invoice to Finance.

Before approving, check:

- the deliverable is genuinely done, against what the SOW described
- it has been through whatever acceptance the SOW set out
- the amount matches the milestone amount
- the remaining budget covers what is still to come

Beeline shows all of this on the SOW: committed, invoiced to date, and remaining. Look at it — a milestone approved in good faith against a SOW that has already run out of budget creates a problem for Finance rather than solving one for you.

Rejecting. Pick a reason and say which deliverable is short and why. The contractor can resubmit once it is resolved. Speak to them first.

Capped time and materials. The invoice carries the hours worked. Check them against what you expected, and watch the cap — Beeline warns at 80%. At 100% the SOW stops accepting invoices until it is revised. That is deliberate: it is the control that stops an engagement quietly doubling.

Revisions. If the work needs more budget or more time, raise a SOW revision before the cap is reached. See Changing or Extending an Engagement.

Credit notes. Where something was invoiced in error, the contractor raises a credit note, which you approve the same way. It nets off the next payment.

Payment timing. Standard terms are 30 days from approval. A contractor chasing payment should go to finance@helvia.ai — but check first that you actually approved the invoice, because an unapproved invoice sitting in your queue is the usual explanation.

Beeline — Reports and Worker Records

****Reports → **** gives you a small set of reports covering the questions that actually come up. All of them export to CSV.

Report	Answers
Active Workers	Who is currently assigned to me, on what, until when
Assignment Spend	Committed versus actual spend per assignment or SOW
Timesheet Status	What has been submitted, approved or is outstanding this week
Upcoming End Dates	Assignments and SOWs ending in the next 60 days
Invoice History	What has been invoiced and paid against an engagement

Managers see their own workers; HR and Finance see everything.

Two worth a standing habit. Check **Upcoming End Dates** monthly — it is the cheapest way to avoid the scramble of an assignment ending next week that you meant to extend. And check **Assignment Spend** before every extension, because the usual surprise is an assignment that ran more hours per week than planned.

Worker records. Open anyone under **Workers** to see their assignment history, current rate, timesheet history and any check-in forms. This is the assignment record, not a personnel file — Beeline holds no medical information, no background check results and no personal documents. Those sit with the agency, which is where they belong.

What Beeline will not tell you. It has no data on the worker's own pay, their employment terms with the agency, or their leave entitlement. That is the agency's, and asking for it puts us on the wrong side of the co-employment line. If you need to know whether someone is available on a particular date, ask them or the agency.

Scheduled reports. HR can set a report to email you weekly or monthly — ask if there is one you keep pulling by hand.

Anything more complicated than these five reports goes to hr@helvia.ai. It is usually quicker for HR to pull it than for you to build it, and if the same question keeps coming up we will add a report.

BambooHR — What We Keep There for External Workers

Every external worker gets a BambooHR record, created by HR once the assignment or SOW is confirmed in Beeline. It is the single answer to "who is this person and are they meant to be here".

What is on the record

- name, work email and start date
- worker type: Contingent or Contractor
- the agency or contractor company
- the hiring manager
- the assignment or SOW end date
- location and, for remote workers, which state
- confirmation that right-to-work checks and any background check are complete

What is deliberately not on it: salary or bill rate, which sits in Beeline; anything about their employment with the agency; medical or accommodation detail, which HR holds separately and confidentially; and personal documents, which stay with their employer.

Why the end date matters. IT works from BambooHR. The end date is what drives account expiry, so an assignment extended in Beeline but not reflected in BambooHR means an account that closes mid-assignment — and an assignment ended in Beeline but not closed properly means an account that never closes at all. HR keeps the two in step, which is why closing things properly in Beeline matters.

What managers can see. Your own team, including external workers: who they are, who they work for, when their assignment ends, and how to contact them. You cannot see other teams' external workers, and nobody outside HR sees pay data.

External workers' own access. Contingent workers get a limited BambooHR account so they appear in the directory and can find people. They have no time-off, benefits or payroll functions — those belong to their employer. Contractors normally get no BambooHR account at all.

The directory. External workers appear with their worker type and their agency or company shown. This is deliberate: anyone looking at the directory should be able to tell immediately who is employed by us and who is not.

Corrections go to hr@helvia.ai. Do not work around a wrong record — a wrong manager or end date has consequences downstream.

Notifications and Cover While You Are Away

Notifications. Beeline emails you when something needs your attention: a timesheet or invoice to approve, candidates ready to review, a request approved or rejected, an assignment ending in 30 days, or a check-in form due.

Leave them on. You can turn them off under Settings → Notifications, but then you have to remember to look, and the thing that gets missed is always a timesheet approval — which delays someone's pay. If the volume is the problem, a mail rule filing them into a folder works better than switching them off.

The one to keep. If you turn everything else off, keep the timesheet approval notification. It is the only one with a hard deadline attached and a person on the other end of it.

Delegates. A delegate acts for you in Beeline while you are away: approving timesheets, expenses and invoices. Set one under **Settings → Delegates**, choose the person, and set a date range — you can do this weeks ahead, and it switches itself on and off.

Your delegate should be someone who knows the work well enough to spot a wrong timesheet. Delegating to someone who will approve everything without looking removes the only control in the chain.

What a delegate cannot do: raise new requests on your behalf, approve above your threshold, or change an assignment. Those wait for you, or go to your manager.

Before any leave longer than a couple of days

- Set a delegate in Beeline with the right dates
- Tell them what is likely to land and anything unusual to watch for
- Deal with anything already in your queue before you go
- Check Upcoming End Dates for anything expiring while you are away, and extend it now

If you leave Helvia or change role, your assignments need reassigning to a new manager — HR handles this, but tell them, because assignments pointing at someone who has gone are approvals nobody is doing and end dates nobody is watching.
